Emerging Professionals Tech Conference
Final Deliverable

By: Braden Bach

Tools Evaluated: Figma & Headspace

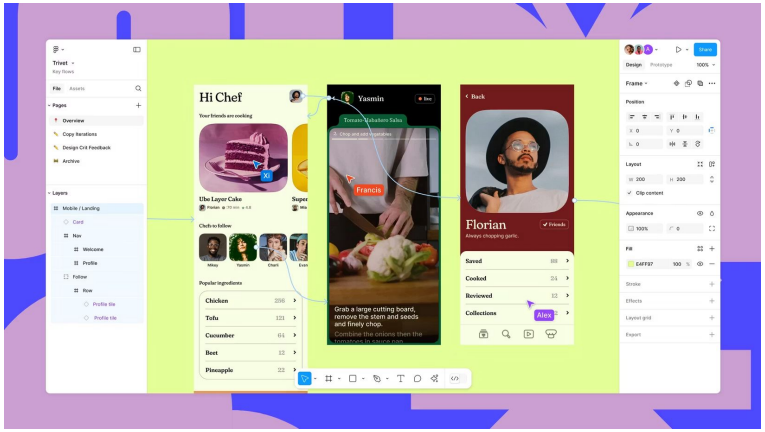
Tool Selection & Rationale

- Figma (Design & Collaboration Tool):
- I selected Figma because it is widely used in professional environments for UI/UX design, real-time collaboration, and rapid prototyping. It supports teamwork, feedback, and version tracking.

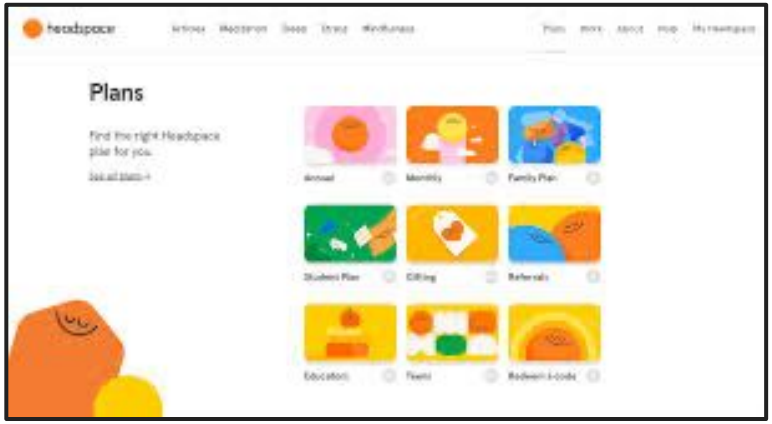
- Headspace (Wellness & Productivity Tool):
- I chose Headspace to represent mental wellness technology. It supports focus, stress management, and habit-building, which are increasingly important skills in modern professional settings.

Integration & Tracking Evidence

- Figma Integration:
- Collaborative design files
- Commenting and version history
- Interactive prototypes



- Headspace Integration:
- Personalized routines
- Focus and breathing sessions
- Progress tracking and streaks



Rogers' Five Attributes – Figma

- Relative Advantage:
- Figma allows real-time collaboration, reducing delays and improving team efficiency.

- Compatibility:
- Compatible with professional design workflows and remote teamwork.

- Complexity:
- Moderate learning curve but intuitive once basic tools are learned.

- Trialability:
- Users can easily test features through free plans and starter files.

- Observability:
- Design changes and improvements are immediately visible to team members.

Rogers' Five Attributes – Headspace

- Relative Advantage:
- Provides accessible mental wellness tools without requiring in-person sessions.

- Compatibility:
- Fits well into busy student and professional schedules.

- Complexity:
- Very low complexity with guided instructions.

- Trialability:
- Short sessions allow easy experimentation.

- Observability:
- Progress is visible through streaks, time tracked, and self-reported focus improvements.

Reflection

- Using Figma and Headspace together really showed me how success today depends on both skills and well-being, not just one or the other. When I worked in Figma, I could actually see how modern collaboration is supposed to function. Instead of working alone and sending files back and forth, everything happened in real time. I was able to share ideas, make changes quickly, and respond to feedback right away, which made group projects feel more organized and less stressful. Using Figma made it clear that productivity now comes from teamwork and communication, not just individual effort, and it felt much more efficient than older design systems I have used before.

- Headspace gave me a completely different but equally important experience. With schoolwork and deadlines piling up, it was easy to feel overwhelmed, and Headspace helped me slow things down. I liked that the sessions were short and realistic, so I could actually fit them into my day without feeling like it was another task to stress about. Over time, I noticed it helped me focus better and manage stress, especially during busy or high-pressure moments. It felt more practical than traditional wellness approaches because it met me where I was instead of requiring a big time commitment.

- Using both tools together showed me that innovation is not just about getting more work done, but about being able to keep going without burning out. Figma helped me work better with others and improve the quality of my projects, while Headspace helped me stay balanced and focused. In the future, I would continue using Figma for group assignments and professional projects, and Headspace as a way to manage stress and stay mentally sharp. Overall, this experience taught me that the best tools are the ones that improve efficiency while also supporting personal well-being, which is essential for long-term success.
